

Overview

We are the "CIO Cognitive Guild". Our mission is to educate, build competence and enable the use of cognitive technologies across organizations in CIO. We are continuously looking for ideas, and user stories where cognitive technology could improve our work and the CIO business processes.

We would like to employ interns for developing cognitive applications using BlueMix. BlueMix is the IBM Cloud solution, that supports the entire application life-cycle including hosting and offers several high tech cognitive services.

Required skills

Development skills: Java, Javascript, working with SQL database

Other technologies: html, json, REST api, web-services, SOAP

Good written and oral English skills.

Preferred skills

Development skills: Node JS, Angular JS, JQuery, working with NOSQL database

Other technologies: HTML5, AJAX, DevOps, Test automation, Linux

Benefits

Interns may achieve the following benefits by this internship program:

- learn the famous Watson functionality
- understand and use cognitive services
- build internal applications using cloud technologies
- work as part of a co-located agile team
- it can be accounted as professional experience

Timing

The positions are open, from March. Work schedule can be flexible.

Possible full-time employment after the successful internship program.

Location

Hungary, 2600, Vác, IBM DSS LLC.
